and the other lip portion has a length set so that, when the one lip portion is ~~bottomed~~ brought into contact with said door glass run body, the other lip portion may not be spaced away from said door glass.

2. (Previously Amended) A door glass run attached to a door sash of a vehicle for sealing between said door sash and a door glass, comprising:

a door glass run body having a substantially U-shaped cross section; and

cont.
E1

a pair of lip portions with each one of the lip portions extending from opposite side of an opening edge of said door glass run body toward a bottom face portion of said door glass run body and slidably contacting with said door glass;

a protrusion being provided on an inner wall face of said door glass run body and contacting with at least one of said lip portions on its rear face;

said protrusion having a height set so that, when said door glass vibrates, an end portion of said at least one of the lip portions does not contact with said door glass run body,

said protrusion is disposed at a position nearer to a base end portion of the at least one of said lip portions compared to a position at which the lip portion and said door glass contact with each other,

and said protrusion is disposed so that said lip portion does not contact with said door glass at a position nearer to said base end portion compared to said protrusion and said lip portion contact with each other.

3. Canceled.

DI cont.
4. (Previously Amended) The door glass run as claimed in claim 2, wherein one lip portion of said pair of lip portions has a length set so that, when the other lip portion of said pair of lip portions is bottomed with said door glass run body, the one lip portion may not be spaced away from said door glass,

and the other lip portion has a length set so that, when the one lip portion is bottomed with said door glass run body, the other lip portion may not be spaced away from said door glass

5. Canceled.

6. (Previously Amended) The door glass run as claimed in claim 1, wherein a concave notch portion is formed and defined by an inner wall face between a base end portion of at least one of the lip portion and said inner wall face of said door glass run body and the concave notch portion has a depth set equal to or smaller than a predetermined depth.

7. (Currently Amended) The door glass run as claimed in claim 2, wherein a concave notch portion is formed and defined by an inner wall face between a base end portion of ~~the~~ at least one of the lip portion portions and said inner wall face of said door glass run body and the concave notch portion has a depth set equal to or smaller than a predetermined depth.

8. Canceled.

9. (Previously Amended) The door glass run as claimed in claim 4,

body, the one lip portion may not be spaced away from said door glass;

means for preventing said lip portions being spaced away from the door glass even if the door glass vibrates in the door glass run body.

17. (Original) The door glass run as claimed in claim 16 wherein said means includes said pair of lip portions having lengths individually set.

cont.
C1
18. (Previously Amended) The door glass run as claimed in claim 11 wherein the depth of the notch portion is equal to 0.5 mm.

19. (Previously Amended) The door glass run as claimed in claim 7 wherein the depth of the notch portion is equal to 0.5mm.

20. Canceled.

21. (Previously Amended) The door glass run as claimed in claim 9 wherein the depth of the notch portion is equal to 0.5mm.

22. Canceled.

23. (New) The door glass run as claimed in claim 9, wherein the depth of said concave notch portion is set equal to or less than 0.5 mm.
